

DR-Planters

THE PERFECT PAIRING: ORTHMAN AND JOHN DEERE®

The Orthman DR-Series Planters are available in a wide range of sizes and with numerous seed-capacity options and other accessories to meet the exact demands of your planting operation. The time-tested, industry-leading Orthman toolbar features a vertical- or stack-folding design depending on size and configuration, and all folding hinges are precision line-bored to ensure smooth folding every time. Depending on the size and configuration, a wide range of the Orthman DR-Series Planters are standard with wing downforce with +/- 8° of wing flex to follow uneven terrain. Other select DR-Planter models feature gull wing up flex with 8° of float. By combining the Orthman toolbar with John Deere planter row units, Central Commodity System (CCS™) or row-unit seed hoppers, you have a planter that will keep your planting operation as efficient as possible.
