

Row Crop Cultivators

CUTTING-EDGE CULTIVATORS FOR EFFECTIVE WEED CONTROL

Steel-to-soil cultivation has been the most tried-and-true method for effective weed control since the beginning of modern farming. It also creates space for crops to more easily access water and nutrients, helping maximize yields. With increasing herbicide-resistant weed strains, row crop cultivators are an important tool to have in your shed. Orthman offers the most complete lineup of row crop

cultivator tillage options, including liquid fertilizer application. You can choose from the model 8315, available in 6- to 16-row units with row widths from 30" to 40" depending on size, or the model 8650, designed for narrow 22" rows in 16-, 18- or 24-row sizes, so you'll be sure to find the right model to fit your tillage needs.
