

Stalk PULLr

ROOT OUT RESIDUE FOR AN IDEAL SEEDBED

When it comes to residue management in your fields, look to the Orthman lineup of tillage tools and the model 600 Stalk PULLr. With horsepower requirements of just 5–10 hp per row and operating speeds of 10 mph or more, you can cover more acres in a day with less fuel than other methods to

keep more of the soil-building residue in your field. The Orthman Stalk PULLr's unique design provides dual overlapping 24" discs with drive lugs to help propel them through the field. The angle and depth adjustability allow you to determine the amount of tillage that occurs in the row.
