

# A NEW REVELATION IN *COVER CROP SEEDING*

FIELD PLANTED WITH ROLLING HARROW COVER CROP SEEDER

Discover a revolutionary approach to cover crop seeding with the **Cover Crop Seeder** option for the Rolling Harrow® soil conditioner! Designed to enhance nutrient management and erosion control, this innovative seeder enables one-pass seeding and tilling, ensuring efficient and effective planting. Whether pulled behind a lead tillage tool or operated independently, it delivers high-speed application and superior seed-to-soil contact for faster planting and a more consistent stand.

- Available for 18' to 37' Rolling Harrow models 1245 and 1245D, the seeder features a spacious 32.5-bushel (40.5 cu. ft.) hopper equipped with side-mounted sight windows, a roll-over tarp, and ground-access operation for easy use.
- Hydraulic drive metering requires 15 gpm at 1,500 psi with a case drain, and the system is controlled via electronic-over-hydraulic rate control or an optional Raven RCM ISOBUS controller for enhanced precision.
- Powered by a reliable air-delivery system that sends seed to the conically shaped deflectors for even seed distribution.
