

A FIERCE ADDITION

TO YOUR STRIP-TILL OPERATION

The **Raptor® strip-tillage tool** models 2130 and 2115 feature the all-new **TerrainPro™2** floating row unit that creates ideal seedbed conditions and ensures consistent fertilizer depth across the entire machine. The Raptor is an all-in-one strip-till and fertilizer delivery solution from the same manufacturer and features a robust design and narrow transport width. Pull-type models are available in 12- or 16-row configurations and can be equipped with a 12-ton dry or 1200-gallon liquid fertilizer system. 3-point mounted models are available in 6-, 8- or 12-row configurations and a new pull-type dry fertilizer cart is available for 6- and 8-row models.

The Raptor was designed from the ground up to meet the demanding needs of the largest strip-tillage operations.
