

HANDLE DRY SPREADING LIKE A PRO

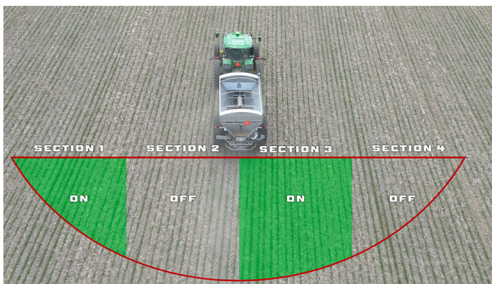

Pro-Force
DRY SPREADERS

The **Unverferth Pro-Force**® dry spreader features large hopper capacities for fewer stops to fill, unrivaled spreading accuracy, and a wide range of options, such as the innovative **Air Command**® section control and ISOBUS scale system. The Pro-Force spreader can handle common fertilizer, compost, poultry litter, and cover crop seed with operator-friendly innovations, top-of-the-line performance, and heavy-duty components. The optional Air Command section control system uses pneumatics to control the flow of fertilizer to the spinner discs for the most precise 4-section control. With the optional Duo-, Tri- or Quad Force multi-hopper options, you can spread up to four different products at the same time, each with a variable rate. Pull-type fertilizer model capacities range from 22 to 9.5 tons and chassis-mounted hoppers are available from 20 to 6 tons. These features make the Pro-Force dry spreader the ideal match for commercial applicators, professional producers, and growers of all sizes.
