

THE LEADER IN REACH AND HEIGHT

If you need additional unloading auger side-reach and height, look to the **Unverferth 60-Series** lineup of corner-auger grain carts. The side-folding design allows the upper auger to be longer, so you can reach over ditches and clear the tallest trucks. Tank capacities range from 750 - 1100 bushels and unloading speeds up to 500 bushels per

minute to get you back to the combine faster. The standard side-to-side turret downspout with 4-way option increases unloading accuracy and steep tank slopes with sump design ensures complete cleanout. Choose from 42" Equalizer® tracks, 36" traditional tracks, high-flotation single wheels and tires, scales, camera and roll-tarp (std. on 1160).
